

# MILTECH™ 918 TSN

## 8 x 1G Ethernet L2/L3 switch with Full TSN and Input/Output clocks

MILTECH 918 TSN is a member of the compact yet fully-featured ethernet switches, aimed at providing advanced timing solutions for military applications on top of a standard Ethernet switch (such as MILTECH918).

Providing 8 x 10/100/1000Base-T ports, 1PPS and 10MHz (In and Out), this switch is designed to support networking and precise timing applications such as manned/autonomous vehicles, Avionics, UAVs, and mobile equipment in battlefield environments.

The tight integration of hardware and software enables the most advanced timing protocols in the industry, including SyncE, IEEE 1588v2, PTP with one/two-step clock, P2P transparent/boundary clock over Ethernet, multiple timing domains, PTP time interface, and NTPv4.

MILTECH 918TSN offers a comprehensive set of enterprise-grade security and networking features, including switching protocols, VLANs, traffic prioritization (QoS), bandwidth aggregation, and many more. In addition, MILTECH 918TSN offers management and monitoring capabilities over multiple protocols such as SNMP, Web, and more.

MILTECH 918TSN is ideal for deployment in the most challenging military environments. Equipped with MIL circular connectors that meets the NGVA standards and durable enclosure, the MILTECH 918TSN is designed to withstand harsh conditions with ease.

MILTECH 918TSN design to meet the IP67, MIL-STD-810: thermal, shock, vibration, altitude, humidity and MIL-STD-461 EMI/EMC.

Wide range of DC input (18-48VDC) and MIL-STD-1275/704 power supply allows easy integration in existing and new solutions.

The compact yet durable design, flat mounting surface and RoHS / REACH Compliance, makes the MILTECH918TSN suitable for almost any application.
