	<i>Voltage Regulation</i>	Up to ±1% (no load to full load, –40 °C to +85 °C and over normal input voltage range).
	<i>Remote Sense</i>	The SENSE is used to achieve accurate load regulations at load terminals (this is done by connecting the pins directly to the load’s terminals). For output voltage above 8V, the use of remote sense has a max limit of 0.25V voltage dropout between converter’s output and load terminals. For output voltage below 8V, the use of remote sense has a max limit of 0.5V voltage dropout between converter’s output and load terminals. When not used connect SENSE to OUT and SENSE RTN to OUT RTN.
	<i>Ripple and Noise</i>	(max. 1%) measured at load across 1 μF and 0.1 μF ceramic capacitors.
	<i>Isolation</i>	200 V _{DC} Output and Case. (At M169-105 it is 500V _{DC})
	<i>Current Limit & Overload</i>	Output turns off and on periodically (hiccup) until fault is condition removed. Protection threshold set at 120% ± 10% of maximum current
	<i>Efficiency</i>	Up to 85-87% - typical (nominal input voltage, full load, room temperature)
	<i>Overvoltage Protection</i>	Active Over-Voltage Protection Internal control shuts output down if voltage exceeds 110% ± 5% of nominal. Passive Over-Voltage Protection A transorb, rated to 120% ± 10% of nominal voltage, is placed across the output
<i>Over Temp. Protection</i>	Unit shuts down if baseplate temperature exceeds 100 ± 5 °C. Automatic recovery upon cooldown to below 90 ± 5 °C.
