Functions and Signals - According to VITA 62

Signal No.	Signal Name	Type	Description
1	FAIL*	Output	Indicates to other modules in the system that a failure has occurred in one of the outputs. Please refer to Figure 2 This signal is referenced to **SIGNAL RTN**.
2	SYSRESET*	Output	Indicates to other modules in the system that all outputs are within their working level. Please refer to Figure 2 This signal is referenced to **SIGNAL RTN**.
3	INHIBIT*	Input	Controls power supply outputs. This signal in conjunction with **INHIBIT** controls the outputs. Please refer to Table 1 and Figure 1 This signal is referenced to **SIGNAL RTN**.
4	ENABLE*	Input	Controls power supply outputs. This signal in conjunction with **INHIBIT** controls the outputs. Please refer to Table 1 and Figure 1 This signal is referenced to **SIGNAL RTN**.
5	GA0*, GA1	Input	Used for geographical addressing. GA1 is the most significant bit and GA0 is the least significant bit. This signal is referenced to **SIGNAL RTN**.
6	SCL, SDA	Bidirectional	I2C bus Clock and Data respectively. Through this bus the voltage and temperature readouts can be shared. This signal is referenced to **SIGNAL RTN**.
7	REF_CLK	Input	The REF_CLK signal is used to allow the power supply frequency to sync with the system frequency. This signal is referenced to **SIGNAL RTN**.
8	VOUT SENSE	Input	The SENSE is used to achieve accurate load regulations at load terminals (this is done by connecting the pins directly to the load's terminals).
9	Alert Bit	Output	Indicates to other modules in the system about Holdup event. Please refer to Figure 2 This signal is referenced to **SIGNAL RTN**.

Detailed Information

1. M4012 Input Voltage Operation.

The M4012 steady state operation voltage is 18V to 48V and will continuously work up to 50V Input line. When Configurable to support MIL-STD 704/1275 transients or surges, the unit will shut down when input voltage rises above 60V or under 16V for more than 2Sec and immediate shut down under 12V or above 100V Input. Power supply automatically recover when it's Input goes back to normal steady state line.

1.1 Low Line Turn-on and Turn-off Limits

To avoid Turn-on and Turn-off glitch the unit have about 2V Hysteresis. The Turn-on threshold is under 20V and turn- off under 18V. Those limits can be adjusted, contact Factory for more information.

2. Outputs Voltage Regulation

The M4012 contains accurate internal sense lines to keep output voltage at less than 4% regulation for all Line/ Load and temperature range (see Table 2).

Output	12V/20A	5V/12A	3.3V/5A	3.3VAux/5A	12VAux/1A	(-)12VAux/1A
Voltage Range	11.85 - 12.15	4.9 - 5.1	3.28 - 3.42	3.2 - 3.4	VS1 - VS1-0.2V	(-)11.8 - (-)12.15

Table 2: Outputs voltage regulation. VIN 18V – 48V, Temperature -55°C – 85°C

2.1. Sense Lines

Sense Lines are provided for VS1, VS2 and VS3 output to compensate line voltage drop. *Sense Lines* proper connection is shown in Figure 3.

Each VSx output has its own *Sense Lines*, additional common *Sense RTN Line* is provided for all VSx Outputs (VITA 62 Standard). Contact Factory for Sense configuration different than the VITA 62 standard

3 Output Power

The M4012 can deliver up to 350W steady state at all temperature and input range.

Total Power Output	12V/20A	5V/12A	3.3V/5A	3.3VAux/5A	12VAux/1A	(-)12VAux/1A

4 Holdup

Unit can support up to 250W@50mSec Holdup per Mil-STD-704

Greater Holdup is optional by using a specialized capacitor or increasing the unit pitch to 1.2". Please contact factory for more details.
