

M4094 SERIES

DC/DC POWER SUPPLY

PRODUCT HIGHLIGHTS

- VITA 62.2 COMPLIANT
- SOSATM ALIGNED
- 3U FORM FACTOR
- UP TO 800 W
- OPERATING TEMP: -55°C to +85°C
- EMI: Compliant to MIL-STD-461G
- Environmental: MIL-STD-810
- Input Options:
 - **MIL-STD-704**
- Cyber secure

Milpower Source, Inc. • Belmont, NH, **USA** • P: (603) 267-8865 Email: sales@milpower.com • Website: www.milpower.com • CAGE: 5YWX2

SPECIAL FEATURES

- VITA 62.2 Compliant
- Aligned with the SOSATM Technical Standard
- Wide input range
- Connectors are VITA 62.2 to increase breakdown voltage
- Up to 800W output power
- Remote sense
- Fixed switching frequency (250 kHz)
- External synchronization capability
- Indefinite short circuit Protection
- Over-voltage shutdown with auto-recovery
- Reverse battery protection
- Over temperature shutdown with auto-recovery
- EMI filters included
- System Management: protocol per VITA 46.11
 - Output voltages and currents
 - Input voltage
 - Card temperature
 - Card system status

Milpower Source, Inc. • Belmont, NH, USA • P: (603) 267-8865 Email: sales@milpower.com • Website: www.milpower.com • CAGE: 5YWX2

Electrical Specifications

$\frac{\textit{DC Input}}{270 V_{DC}}$

Works Through MIL-STD-704 (A-F) Normal and Abnormal Steady State

Works Through MIL-STD-704(E-F) Normal transients

Protected MIL-STD-704(B-D) Normal/Abnormal Transients

Protected MIL-STD-704(E-F) Abnormal Transients

DC Output

VS1: 12V up to 64A 3.3VAux: 3.3V up to 15A **Isolation**

Over 20 M Ω at test voltage: 500V between Input to Output and case (while Output & Case shorted together).

100V between Output to Case.

Efficiency

Up to 91%

EMC

Designed to meet: MIL-STD-461G CE101, CE102, CS101, CS114, CS115, CS116

Line/Load regulation

See table 2

Ripple and Noise

Typically, less than 50mV_{p-p} (max. 1%_p). Measured across a 0.1μF capacitor and 10µF capacitor on load across Temperature Range.

Load Transient Overshoot and

Undershoot

Output dynamic response of less than 5% at load Step of 60%-90%.

Output returns to regulation in less than 1mSec

System management options:

- 1) I2C
- 2) IPMI
- 3) VITA 46.11 Tier II IPMC

Data available:

- Output voltages and currents
- Input voltage
- Card temperature
- Card status

Normal Quiescent Current:

Inhibited Output: 20mA (3.3VAux Only) Disabled Input: 17mA (All Outputs Off)

Environmental 1

Design to Meet MIL-STD-810G

Temperature

Operating: -55°C to +85°C at

unit edge

Storage: -55°C to +125°C

č

Designed to meet 600 thermal cycles

durability test

Humidity

Altitude

Method 507.5, Up to 95%

Method 500.5, Procedure I &

II Storage/Air Transport: 40 kft Operation/Air carriage: 70 kft

RH

Salt Fog:

Method 509.5

Fungus

Does not support fungus growth, in accordance with the guidelines of MIL- STD-454, Requirement 4.

Shock

Method 516.6

40g, 11msec saw-tooth (all directions)

Vibration

Vibration: Figure 514.6E-1. General minimum integrity exposure. (1 hour per axis.)

Milpower Source, Inc. • Belmont, NH, USA • P: (603) 267-8865

Email: sales@milpower.com • Website: www.milpower.com • CAGE: 5YWX2

Reliability: 375,135 Hours, calculated IAW MIL-HDBK-217F Notice 2 at +65 °C, GF

Note 1: *Environmental Stress Screening (ESS)* Including random vibration and thermal cycles is also available. **Please consult factory for details.**

Doc: M4094 | Rev n | Mar 30, 2025 Page 4 from 17

Protections 1 Input

• Inrush Current Limiter Peak value of 5 x I_{IN} for initial inrush currents lasting more than 50µSec.

• Under Voltage

Unit shuts down when input steady state voltage drops below $200V_{\rm DC}$.

Automatic restart when input voltage returns to nominal range.

Milpower Source, Inc. • Belmont, NH, USA • P: (603) 267-8865

Email: sales@milpower.com • Website: www.milpower.com • CAGE: 5YWX2

Output

- Passive over voltage protection on Aux outputs
 Transorb, selected at 25% ± 5% above nominal voltage, is placed across the output for passive voltage limit.
- Active over voltage protection on VS# outputs 20% ± 5% above nominal voltage.

 Automatic recovery when output voltage drops below threshold.
- Overload / Short-Circuit protection

Continuous protection (10-30% above maximum current) for unlimited time (Hiccup). Automatic recovery when overload/short circuit removed.

General

• Over Temperature Protection
Automatic shutdown
at internal temperature of 95 ± 5°C.
Automatic recovery when
temperature drops below 90 ± 5°C.

Note 1: Thresholds and protections can be modified / removed (please consult factory)

Functions and Signals - According to VITA 62

Signal Name	Туре	Description
FAIL*	Output	Indicates to other modules in the system that a failure has occurred in one of the outputs. Please refer to Figure 2 ¹
SYSRESET*	Output	Indicates to other modules in the system that all outputs are within their working level. Please refer to Figure 2 ¹
INHIBIT*	Input	Controls power supply outputs. This signal in conjunction with ENABLE controls the outputs. Please refer to Table 1 and Figure 1 ¹
ENABLE*	Input	Controls power supply outputs. This signal in conjunction with INHIBIT controls the outputs. Please refer to Table 1 and Figure 1 ¹
GA0*, GA1*, GA2*	Input	Used for geographical addressing. GA2 is the most significant bit and GA0 is the least significant bit. ¹
SCL_A, SDA_A	Bidirectional	I2C bus Clock and Data respectively. Through this bus the voltage and temperature readouts can be shared. 1
SCL_B, SDA_B	Bidirectional	Redundant I2C bus Clock and Data respectively. Through this bus the voltage and temperature readouts can be shared. 1
Sync_In	Input	The Sync_In signal is used to allow the power supply frequency to sync with the system frequency. ¹ Optional.
VOUT SENSE	Input	The SENSE is used to achieve accurate load regulations at load terminals (this is done by connecting the pins directly to the load's terminals).
3.3Vaux A.C.S	Bidirectional	Support 3.3 Vaux Active current share between Outputs. See Current Share para. 123 (Optional, non-SOSA configuration)
PO#_SHARE	Bidirectional	Support current share between Outputs ¹
Alert Bit	Output	Indicates to other modules in the system about Input Voltage loss. Please refer to Figure 2 $^{\rm 12}$

Notes:

1. Signal referenced to **SIGNAL RTN**.

Detailed Information

1.M4094 Input Voltage Operation.

The M4094 steady state operation is per Mil-STD-704. Unit will work thorough all Mil-STD-704E/F Transients. Unit is protected during Abnormal transients and interrupts.

2. Outputs Voltage Regulation

The M4094 contains accurate internal sense lines to keep output voltage at less than 2% regulation for all Line/ Load and temperature range (see Table 2).

Output Voltage Range	12V/64A	3.3V/15A
Active Current Share	11.85V - 12.15V	3.28V - 3.42V
Passive Current Share	N/A	3.25V - 3.45V

Table 2: Outputs voltage regulation. Temperature -55 to 85 °C

2.1. Sense Lines

Sense Lines are provided for VS1, VS2 and VS3 output to compensate line voltage drop. Sense Lines proper connection is shown in Figure 3.

Each VSx output has its own *Sense Lines*, additional common *Sense RTN Line* is provided for all VSx Outputs (VITA 62 Standard).

Contact Factory for Sense configuration different than the VITA 62 standard

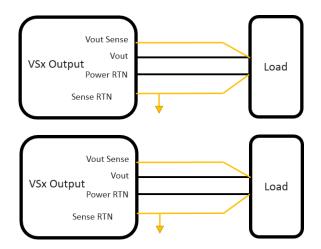

Figure 4: M4094 Sense line connection

3. Current Share (C.S)

Current Share of two or more units is optional (Contact Factory) Unit can support parallel configuration of two units. VS1 & VS2 and Aux will current share with about 5-10% load balance.

The unit can support two methods of current sharing:

3.1 Passive Current Sharing (P.C.S)

Current sharing is done in open loop, output voltage drops as a function of output load. Load Balance of about 5-10% load is expected.

3.2 Active current sharing (A.C.S)

Current sharing is done in a closed loop. All paralleled outputs are compared and feedback is used to balance their load current. The result is a more stable, less sensitive output voltage without voltage drop.

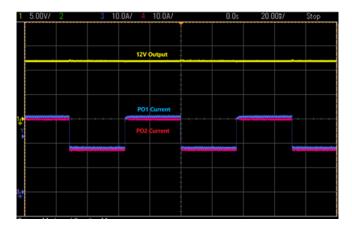

Load Balance of about 2-5% load is expected.

3.3 Current share connection between two Units.

For a required output to current share please connect the following Pins between the two units

- PO#_Sense & PO#_Sense_RTN (for best performance, Pins from paralleled units should be connected to a single point and as close as possible to the load point)
- *VS1_SHARE (A7)*
- *VS1_ACS (C7)*
- 3.3Vaux_SHARE (B7)
- 3.3Vaux_ACS (D1) Optional^{1 2}

Typical ACS Dynamic Load of Two 12V Paralleled Outputs

Notes

1. When not used, 3.3Vaux A.C.S can be left open.

When ordering 3.3 Vaux P.C.S or 3.3 Vaux Non-Current Share unit, this pin is Internally disconnected

2. 3.3 Vaux ACS (Pin D1) is not required by SOSA and is optional.

4 Communication Protocol

Unit communication protocol can be configured as VITA 46.11 Tier 2 IPMC or Custom IPMI compatible protocol. For more details on IPMI or VITA 46.11 protocol refer to para. 4.1 or 4.2 respectively below.

4.1 Custom IPMI Protocol

Electrical Parameters

Vcc: 3.3VDC Pull-up: 2.2kOhm Input capacitance: 100pf

Slave Device Addressing

- 256 address spaces

- Baud rate: 200kHz maximum

- 7 Bit Protocol

- Support Slot Addressing per VITA 62

Slot Number	MSB A6	A5	A4	A3	A2/GA2*	A1/GA1*	A0/GA0*	LSB R/W
Slot0	0	1	0	0	0	0	0	
Slot1	0	1	0	0	0	0	1	
Slot2	0	1	0	0	0	1	0	
Slot3	0	1	0	0	0	1	1	

^{*} Slot location is determined by GAx per VITA 62.

Communications Supported

Read Command – 21Hex, deliver 64Bytes of Data. (More commands are available by request) The communication starts when the master sends a start followed by the unit slave address, command, checksum and a stop. A second start followed by the slave address and a read will be followed by a 64 Bites response.

S	Slave Address	R/W	A	Command	A	Check sum	Α	Р
	A6:A0	0	0	21 Hex	0	DF Hex	0	

S	Slave Address	R/W	Α	DATA	Α	DATA	Α	DATA	Α	 DATA	Α	Check sum	N/A	Р

4.2 VITA 46.11 Tier 1 IPMC Protocol

Please see 46.11 User Manual for detailed information of operation.

Sensors included are seen in the table below.

Units are designed to be upgradable to 46.11 Tier 3 compliance upon release of that specification

Record ID	Sensor ID	Sensor Type	Name	
0000	00	F0h	FRU State Sensor	
0001	01	F1h System IPMB Link Sensor		
0002	02	F2h FRU Health Sensor		
0003	03	02h	FRU Voltage Sensor	
0004	04	F3h	FRU Temperature Sensor	
0005	05	F4h	Payload Test Results Sensor	
0006	06	F5h	Payload Test Status Sensor	
0100	07	02h	VS1 Voltage	
0103	0A	02h	3.3Vaux Voltage	
0106	0D	03h	VS1 Current	
0109	10	03h	3.3Vaux Current	
010C	13	01h	Analog Temperature	
9999	N/A	N/A	Device Management	

5. Sync In and Switching Frequency

Standard switching frequency with no Sync In signal applied is 220kHz ±5%.

When optionally configured to have Sync In functionality the unit will sync to a signal between 200kHz and 300kHz $\pm 5\%$. The square wave must be at 3.3V CMOS standard logic levels with a duty cycle between 20% and 80%.

The M4094 will sync after 32 cycles of within tolerance external clock cycles. The unit will revert to its internal clock frequency upon any out of specification clock cycles and will need 32 good cycles to resync to the external clock.

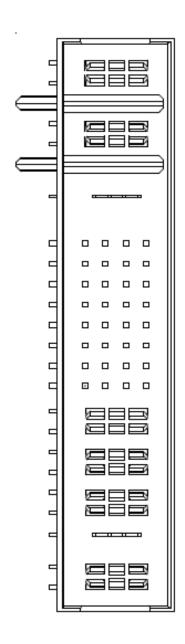

Contact factory to add Sync_in functionality and to customize its configuration values.
