

## M6212 SERIES

*DC/DC POWER SUPPLY*

### PRODUCT HIGHLIGHTS

- MINIATURE
- HIGH DENSITY
- HIGH EFFICIENCY
- SINGLE OUTPUT
- DC/DC POWER SUPPLY
- UP TO 200 W

**Applications**

*Military (ground-fix, shipboard), Ruggedized, Telecom, Industrial*

**Special Features**

- Miniature size
- High efficiency
- Wide input range
- Input / Output isolation
- Remote Inhibit
- Zero Voltage Switching Topology
- Fixed switching freq. (250 kHz)
- External sync capability
- EMI filters included
- Remote sense compensation
- Indefinite short circuit protection with auto-recovery
- Over-voltage shutdown with auto-recovery
- Over temperature shutdown with auto-recovery

**Electrical Specifications**

**DC Input**

Voltage range: 18 to 48 V<sub>DC</sub>

Transient protection (no damage) IAW MIL-STD-1275A (100 V for 50 ms) and IAW MIL-STD-704A (80 V for 0.1 s)

**Line/Load regulation**

Less than ±1% (No load to full load, -55 °C to +85 °C, and over input voltage range).

**Ripple and Noise:**

Less than 50 mV<sub>p-p</sub>, typical (max. 1%) without external capacitance. When connected to system capacitance ripple drops significantly.

**DC Output**

Voltage range: 1.5 to 28 V<sub>DC</sub>

Current range: 0 to 40 A

Power range: 0 to 200 W

**Efficiency**

Typical 90-92% - (full load, room temperature)

**Transient Over-and-undershoot**

Output resistance at load change of 50%-100% is 30-200 mΩ (depending on output voltage). Output back to steady stated within 300-500 μs

**Isolation**

Input to output: 200 V<sub>DC</sub>

Input to case: 200 V<sub>DC</sub>

Output to case: 100 V<sub>DC</sub>

**EMC**

Designed to meet MIL-STD-461F\* CE101, CE102, CS101, CS114, CS115, CS116, RE101, RE102, RS101, RS103

**Turn on Transient**

No overshoot

\* EMC compliance achieved when tested with 5 μH LISNs, shielded harness and static resistive load.

**Protections \***

**Input**

- **Under Voltage Lock-Out**  
Unit shuts down below  $16.5 V_{DC} \pm 1 V_{DC}$
- **Over Voltage Lock-Out**  
Unit shuts down above  $52 V_{DC} \pm 2 V_{DC}$

**Output**

- **Active Over Voltage Protection**  
Internal control protects unit and load (no damage) if output exceeds nominal voltage by  $10\% \pm 5\%$  due to internal failure.
- **Passive Over Voltage Protection**  
Transorb across output selected at  $20\% \pm 10\%$  above nominal voltage.
- **Current Limiting**  
Continuous protection (10-30% above maximum current) for unlimited time (Hiccup).

**General**

- **Over Temperature Protection**  
Output shuts down if base plate temperature exceeds  $+105\text{ }^{\circ}\text{C} \pm 5\text{ }^{\circ}\text{C}$ .  
Output recovers automatically when base plate temperature returns to below  $+95\text{ }^{\circ}\text{C} \pm 5\text{ }^{\circ}\text{C}$ .

**Environmental Conditions \*\***

Designed to meet MIL-STD-810F

**Temperature**

Operating:  $-55\text{ }^{\circ}\text{C}$  to  $+85\text{ }^{\circ}\text{C}$   
(measured at base plate)  
Storage:  $-55\text{ }^{\circ}\text{C}$  to  $+125\text{ }^{\circ}\text{C}$

**Altitude**

Method 500.4  
Procedures I & II, up to 70,000 ft.

**Salt Fog**

Method 509-4

**Humidity**

Method 507.4  
Up to 95%.

**Vibration**

Method 514.5  
Category 4  
General minimum integrity exposure IAW Figure 514.5C-17, 1 hour per axis.

**Shock**

Method 516.5  
Procedure I  
Saw-tooth, 20 g peak, 11 ms

**Reliability**

150,000 hours, calculated per MIL-STD-217F Notice 2 at  $+85\text{ }^{\circ}\text{C}$  baseplate, Ground fixed.

**Environmental Stress Screening (ESS)**

Including random vibration and thermal cycles is also available. **Please consult factory for details.**

\* Thresholds and protections can be modified / removed – please consult factory.

\*\* All environmental requirements can be tailored per customer needs – please consult factory.

## Functions and Signals

### INHIBIT

The INHIBIT signal is used to turn the power supply ON and OFF.

TTL "1" or OPEN – will turn on the power supply. (For normal operation leave the signal not connected.)

TTL "0" – will turn off the power supply.

### SYNC IN

The SYNC signal is used to allow the power supply frequency to sync with the system frequency.

The synchronization frequency should be 250 kHz  $\pm$  10 kHz.

When not connected the power supply will work from internal clock at 250 kHz  $\pm$  10 kHz.

### SIGNAL RTN

The SIGNAL RTN is referenced to the VIN RTN.

This is used as grounding for SYNC IN and INHIBIT signals.

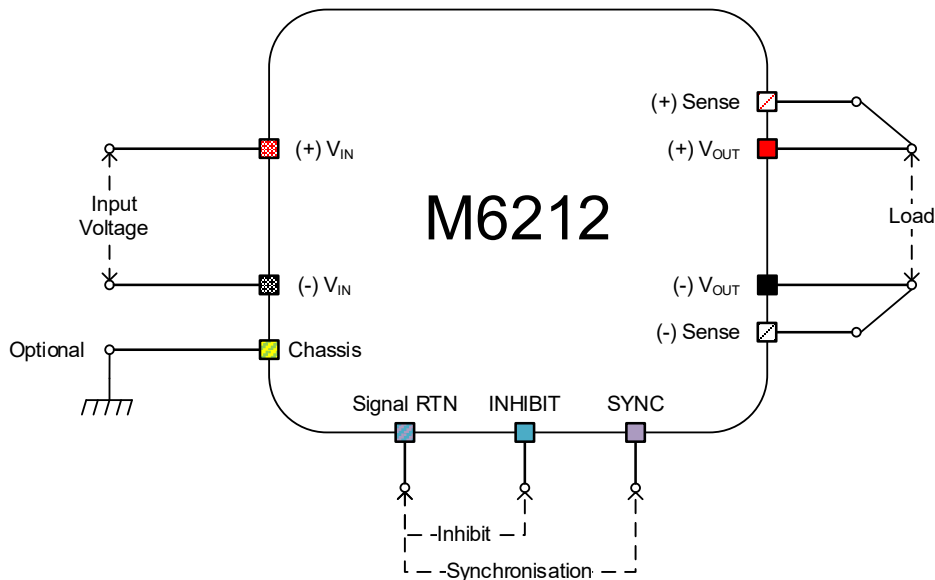

### SENSE

The SENSE is used to achieve accurate load regulations at load terminals (this is done by connecting the pins directly to the load's terminals).

The use of remote sense has a limit of voltage dropout between converter's output and load terminals of 2% to 10% of voltage output.

When not used connect SENSE to OUT and SENSE RTN to OUT RTN

## Typical Connection Diagram

**Pin Assignment**

**Connector type:** Positronic DD44M3000S-759.1 or eq.

**Mates with:** Positronic DD44S###0S-759.0 or eq.

Pin #	Function
1	OUT RTN (-)
2	OUT RTN (-)
3	OUT RTN (-)
