‡ Compliance achieved with 5µH LISN, shielded harness and static resistive load.

*Protections**

Input

- **Input Reverse Polarity** Protection for unlimited time, up to -48 V_{DC}.
- **Under-Voltage Lock-Out** Unit shuts down if input voltage falls below 14 V ± 1 V, and turns back on at 16 V ± 1 V.
- **Over-Voltage Lock-Out** Unit shuts down if input voltage rises above 54 V ± 2 V, and turns back on at 50 V ± 2 V. Extended versions available for compliance with various standards.

Output

- **Active Overvoltage Protection** Secondary independent control, fed directly from the output, is set to override the primary control in case of control loss, and keeps output voltage at 110% ± 5% of nominal.
- **Passive Overvoltage Protection** Transorb placed across the output, selected at 120% ± 10% of nominal voltage.
- **Current limiting** Continuous protection (10-30% above maximum current) for unlimited time (Hiccup).

General

- **Over Temperature Protection:** Unit shuts down if baseplate temperature rises above +105 °C ± 5 °C. Unit recovers automatically when baseplate temperature falls below +95 °C ± 5 °C.

Functions and Signals

INHIBIT signal

The ***INHIBIT*** signal is used to turn the power supply ON and OFF.
TTL "1" or OPEN – will turn on the power supply (For normal operation leave the signal not connected). TTL "0" or short– will turn off the power supply.
(Optional to change the logic of this signal. Please consult with factory.)

SYNC signal

The ***SYNC*** signal is used to allow the power supply frequency to sync with the system frequency.
The system frequency should be 250 kHz ± 10 kHz.
When not connected the power supply will work at 250 kHz ± 10 kHz.

SIGNAL RTN

The ***SIGNAL RTN*** is used as a return path for ***SYNC*** and ***INHIBIT*** signals. This pin is referenced to ***VIN RTN***.

SENSE

The ***SENSE*** is used to achieve accurate load regulation at load terminals. This is done by connecting the pins directly to the load terminals.
The remote sense correction function is limited to voltage drop between converter's output and load terminals of 2% to 5%, or up to 0.5V, the least of the two.
When not used, connect ***SENSE*** to ***VOUT*** and ***SENSE RTN*** to ***VOUT RTN.***
Do not leave ***SENSE*** and ***SENSE RTN*** pins unconnected. These pins can be tied internally to avoid external connection, if function is not required – *consult factory.*
