Signals Description

SENSE 1 (pin 11)

The **SENSE 1** line is used to achieve accurate voltage regulation at load 1 terminals. To use this feature, connect this pin directly to load 1's positive terminal.

If this function is not required, short **SENSE 1** to **OUT 1** (pins 12, 13, 26 and 27) as close as possible to the connector.

SENSE 1 RTN (pin 30)

The **SENSE 1 RTN** line is used to achieve accurate voltage regulation at load terminals. To use this feature, connect this pin directly to load's negative terminal.

If this function is not required, short **SENSE 1 RTN** to **OUT 1 RTN** (pins 14, 15, 28 and 29) as close as possible to the connector.

Note: The use of remote sense has a limit of voltage dropout between the converter's output and the load's terminals of approximately 5% of nominal output voltage.

INHIBIT (pin 1)

The **INHIBIT** signal is used to turn the power supply ON and OFF. TTL "1" or OPEN – Power supply active (output turned on).

TTL "0" or SHORT to Signal RTN – Power supply inhibited (output turned off). If this function is not required, leave this pin unconnected.

This signal is referenced to **SIGNAL RTN** (pin 17)

SYNC (pin 16)

The **SYNC** signal is used to synchronize the power supply's switching frequency to system's clock. Valid external clock frequency is 250 kHz \pm 10 kHz.

If this function is not required, leave this pin unconnected - the power supply will use its internal clock. This signal is referenced to **SIGNAL RTN** (pin 17)

SIGNAL RTN (pin 17)

Both **INHIBIT** and **SYNC** signals are referenced to this pin. This pin is referenced to **IN RTN** (pins 7, 8, 22 and 23) .

CHASSIS (pin 2)

The **CHASSIS** pin allows additional connection of unit's chassis to system ground.
